# Tree Identification

**Event:**                                     TREE IDENTIFICATION

**Participation:**              Team of 6 Pathfinders

**Equipment needed:**              Will be provided

**Object:**                         To match 15 names of the trees (labels) with the picture
                                            of the tree/leaves

**Time allotment:**

**Directions:**   Team will line up at the starting line and on the start command, team
                        will run 15 feet to the tree identification board.  Next to the board will
                        be a container holding 15 labels
                        of trees/leaf.  The pathfinders are to take the labels and match
                        them to the correct picture of the tree/leaf shown.  As soon
                        as the team matches all the name labels to the pictures they
                        tell the coordinator assigned to that board they are finished.
                        The coordinator will make corrections if necessary and give a
                        score.

        **1st place 15 correct matches**

        **2nd place 13 -14 correct matches**

        **3rd place 12 and under**

The enclosed pictures will be used for the Tree Identification Event.  The only
difference is that 15 our to the 20 pictures will be used.  Make copies, cut into
squares omitting the tree name and use for practice.

**Note:** This is one of the steps needed to get a Tree Honor.  The Tree Honor
requires that Pathfinder correctly identify 15 trees and does not specify types,
location, fruit or non
fruit bearing trees.  You may want to use one of the many tree books that are
available so the pathfinder can have a better concept of what the tree, as well as
the leaf, looks like.
